Spatial Compartmentalization of Signaling Imparts Source-Specific Functions on Secreted Factors

First Author: Elena Groppa | Senior Author: Fabio Rossi *(pictured)*
Cell Reports | UBC

Efficient regeneration requires multiple cell types acting in coordination. To better understand the intercellular networks involved and how they change when regeneration fails, the authors profile the transcriptome of hematopoietic, stromal, myogenic, and endothelial cells over 14 days following acute muscle damage. They generate a time-resolved computational model of interactions and identify VEGFA-driven endothelial engagement as a key differentiating feature in models of successful and failed regeneration. Predicting Severity in COVID-19 Disease Using Sepsis Blood Gene Expression Signatures

First Author: Arjun Baghela | Senior Author: Robert Hancock *(pictured)*
Scientific Reports | UBC, SFU, and Asep Medical

Severely-afflicted COVID-19 patients can exhibit disease manifestations representative of sepsis, including acute respiratory distress syndrome and multiple organ failure. The authors hypothesized that diagnostic tools used in managing all-cause sepsis, such as clinical criteria, biomarkers, and gene expression signatures, should extend to COVID-19 patients. Congratulations CIHR Fall 2022 Project Grant Recipients

BC Children's Hospital

Congratulations to the BC Children's Hospital Research Institute and Women's Health Research Institute investigators and their teams who were awarded \$8 million in funding through the Canadian Institutes of Health Research (CIHR) Fall 2022 Project Grant competition. Recipients include Dr. Stefan Taubert *(pictured)* for his project titled "Genetic mapping of a stress response and pro-longevity network in *C. elegans* and human cancer cells". [Read More](#)

Announcing the Winners of the Research 180 Video Competition

Canadian Blood Services

This year, Canadian Blood Services offered the Research 180 Video Competition in partnership with the Centre for Blood Research at UBC. The video "From research to policy...and back", produced by Elyn Rowe *(pictured)*, a PhD student with Dr. Dana Devine at the Centre for Blood Research, was awarded the first-place prize of \$500. DMCBH Members Awarded Fall 2022 CIHR Project Grants to Support Health Research

Djavad Mowafaghian Centre for Brain Health (DMCBH)

The Canadian Institutes of Health Research (CIHR) has announced the results of its Fall 2022 project grant competition. Congratulations to all the Djavad Mowafaghian Centre for Brain Health members who were awarded project grants, including Dr. Peter Crompton *(pictured)*, who received funding for his project "Neck muscle and head-neck dynamics in rollover crashes". [Read More](#)

UBC Faculty of Medicine Researchers Receive More than \$5M as Part of Canada's Largest Investment in Clinical Trials

UBC Faculty of Medicine

UBC Faculty of Medicine researchers, including Dr. Kevin Hay *(pictured)*, have been awarded federal funding as part of Canada's largest-ever investment in clinical trials. The Canadian Institutes of Health Research Clinical Trials Fund dedicated \$250 million across three funding streams to grow and strengthen Canada's clinical trials infrastructure, training, and research through 2025. Six LSI Researchers Awarded Funding Through Fall 2022 CIHR Project Grant Competition

Life Sciences Institute (LSI)

Congratulations to the successful applicants in the Canadian Institutes of Health Research Fall 2022 Project Grant competition! Recipients at the UBC LSI include Dr. Carolyn Brown *(pictured)* for her project "Role of XIST in human X-chromosome inactivation and health", and Dr. Pieter Cullis for his project "Newly optimized lipid nanoparticle systems for genetic drugs and gene therapy in neurological diseases." DMCBH Trainee Spotlight: Judy Cheng

Djavad Mowafaghian Centre for Brain Health (DMCBH)

The human brain has fascinated Judy Cheng *(pictured)* for as long as she can remember. Cheng's research focuses on synaptic plasticity in Huntington disease and how impaired signaling of different neurotransmitters, such as dopamine and endocannabinoids, can lead to the motor and cognitive deficits of this movement disorder. Rwanda FDA Approves Platform Life Sciences and GreenLight Biosciences to Launch a Phase I Clinical Trial in Rwanda for mRNA COVID-19 Vaccine

Platform Life Sciences

Platform Life Sciences, a high impact clinical research organization with the mission to modernize clinical trials on a global scale, has signed a key agreement with GreenLight Biosciences to support their Phase I clinical trial, GLB-003, for a novel mRNA vaccine against COVID-19 in Rwanda — that has been approved by the Rwanda Food and Drug Administration. The Valley of Never-Having-Lived: Canada's Innovation Talent Problem

The Hill Times

As Canadian policy and investment encourages more innovative startups, we constantly hear about the "valley of death": the point where a startup has some momentum but struggles for market traction. We hang lofty hopes on research-based startups getting past this to solve global challenges and grow into scalable companies. However, focusing on the valley of death will keep us ignoring a valley in even greater need of bridges: The Valley of Never-Having-Lived. [Read More](#)
